

eCIR: Comprehensive Windows Registry Forensics Report

Analyst: Ahmed Emad Eldeen Nasr

Role: Security Operations Center (SOC) & Incident Response Analyst

Course Alignment: eCIR Course

Date of Analysis: May 13, 2026

1. Executive Summary & Incident Scenario

Company XYZ's IT department received a high-priority tip regarding suspected employee misconduct. The subject in question is alleged to have violated corporate acceptable use policies by engaging in unauthorized personal communications (chatting) during working hours and installing unapproved or illegal software. As an Incident Response Analyst, the objective is to perform a targeted forensic analysis of the user's acquired Windows Registry hives (SYSTEM, SOFTWARE, SAM, and NTUSER.DAT) to profile the user's behavior, identify installed applications, and determine if anti-forensic techniques were employed to mask the activity.

2. Task 1: Profiling the Host System

The initial phase of the investigation requires establishing a baseline profile of the compromised host using the SYSTEM and SOFTWARE registry hives.

Artifact	Extracted Value	Forensic Methodology & Path
Computer Name	40RENSICS	Extracted from the SYSTEM hive. Navigated to ControlSet001\Control\ComputerName\ComputerName
Operating System	Windows 8.1 Enterprise	Extracted from the SOFTWARE hive. Verified via the ProductName string in Microsoft\Windows NT\CurrentVersion

Artifact	Extracted Value	Forensic Methodology & Path
Time Zone Configurations	UTC-8 (Pacific Time) DST: Active	Analyzed SYSTEM\CurrentControlSet\Control\TimeZoneInformation. The Bias value is 480 (8 hours behind UTC). The ActiveTimeBias is 420, indicating Daylight Saving Time is actively applied (7 hours behind UTC).
Installation Date	June 21, 2016, 08:37:45 UTC	The InstallDate integer 1466498265 was extracted from SOFTWARE\Microsoft\Windows NT\CurrentVersion and converted from a UNIX epoch timestamp.
Registered Owner & Root	Owner: Hunter Root: C:\Windows	Located in SOFTWARE\Microsoft\Windows NT\CurrentVersion under RegisteredOwner and SystemRoot.
Last Logged On User	Hunter	Confirmed via the LogonUI tracking key: SOFTWARE\Microsoft\Windows\CurrentVersion\Authentication\LogonUI

3. Task 3: Security Account Manager (SAM) Analysis

The SAM hive was parsed to identify local accounts and specifically target the user profile of interest to bind user activity to a specific Security Identifier (SID).

- **Local Accounts Identified:** Four accounts were discovered under SAM\Domains\Account\Users. These include Administrator, Guest, Hunter, and HomeGroupUser\$.

- **Target User Identification:** The user Hunter is the primary subject. Cross-referencing the LastLoggedOnUserSID from the SOFTWARE hive with the SAM hive reveals Hunter's exact SID.
- **SID & RID Details:** The assigned SID for Hunter is S-1-5-21-2489440558-2754304563-710705792-1001. The Relative Identifier (RID) is 1001, denoting it as the first standard user account created on this local system.

4. Task 4: User Activity Profiling via NTUSER.DAT

The NTUSER.DAT hive maps directly to the targeted user (Hunter) and contains critical artifacts proving execution, file access, and application history.

4.1 Application Execution, Persistence, and Suspicious Software

- **General Installed Software:** Evaluation of SOFTWARE\Microsoft\Windows\CurrentVersion\App Paths revealed standard corporate applications (MS Office, Adobe Reader, 7-Zip, Notepad++, Chrome) alongside utility software (Python, CCleaner).
- **Policy Violation (Unauthorized Communication):** Execution traces for SkypeSetup.exe and Skype.Desktop.Application were located. This directly substantiates the HR tip regarding unauthorized personal chatting during business hours.
- **Critical Finding (Anti-Forensics):** The application BCWipe.exe was positively identified in the registry. Jetico BCWipe is a military-grade data erasure tool designed to securely wipe files and free disk space beyond recovery. The presence of this tool strongly suggests premeditated intent to destroy digital evidence, elevating the severity of the misconduct.
- **System Startup (Persistence):** The Run key located at SOFTWARE\Microsoft\Windows\CurrentVersion\Run was manipulated to execute C:\Windows\system32\VBBoxTray.exe automatically upon user login, indicating the system is likely operating as a VirtualBox guest virtual machine.

4.2 Most Recently Used (MRU) Artifacts

MRU keys log the exact locations and files the user interacted with via standard Windows dialog boxes.

Artifact Type	Identified Details
OpenSavePidlMRU	Two primary documents were recorded: 1. Welcome.docx located at C:\Users\Hunter\Documents\Welcome.docx 2. A network architecture diagram named home-network-design-networking-for-a-single-family-home-case-house-arkko-1433-x-792.jpg located under My Computer\Documents.
Last Opened Timeline	The most recently accessed file was Welcome.docx, opened on June 21, 2016, at 12:27:37 . This is corroborated by cross-referencing the timestamp within the MRU position list.
LastVisitedPidlMRU	The application executable responsible for the latest tracked dialog interaction was chrome.exe, correlating directly with the timestamp of June 21, 2016, at 12:27:37 .

4.3 UserAssist Analysis

The UserAssist key records GUI-based execution events. Values are obfuscated by Microsoft using **ROT-13 encoding**, a substitution cipher that replaces a letter with the 13th letter after it in the alphabet. For instance, the raw registry string HRZR_PGYFRFF\BA decrypts seamlessly to UEME_CTLSESSION.

- **Executable Tracking (CEBFF5CD):** The GUID key {CEBFF5CD-ACE2-4F4F-9178-9926F41749EA}, which tracks executable files, contained a total of **68 entries** within its Count subkey.
- **Shortcut Tracking (F4E57C4B):** The GUID key {F4E57C4B-2036-45F0-A9AB-443BCFE33D9F} tracks .lnk shortcut executions.
- **Application Frequency:** Analysis of the LNK tracking key revealed that the **Google Chrome** shortcut was the most frequently executed user application. The Run Counter for the Chrome shortcut was recorded at **12 executions**.

- **Last Execution:** The timestamp for the last recorded execution of the Google Chrome shortcut was pinpointed precisely to **June 21, 2016, at 01:43:24**.

5. Conclusion & Recommendations

The forensic registry analysis confirms multiple aspects of the initial HR tip. The user "Hunter" executed unauthorized communication software (Skype). More alarmingly, the presence of the data destruction utility BCWipe.exe indicates that the user was likely aware of policy violations and took proactive steps to implement anti-forensic countermeasures. It is highly recommended to escalate the investigation to include full disk image analysis, focusing on recovering wiped sectors and analyzing LNK files and Shellbags for further evidence of lateral movement or exfiltration.
